- Create tables and insert the data based on the tables above (complete the table with the appropriate primary key, foreign key and data type)!
- Add two columns, i.e., TAX and NETPRICE in DETAILITEM table and insert the data in those columns based on these equations:
 - $TAX = 12\% \times TOTALPRICE$ if $TOTALPRICE \leq 100000.00$ and $TAX = 0$ if $TOTALPRICE > 100000.00$
 - $NETPRICE = TOTALPRICE + TAX$
